### 8.6 Practice B

## In Exercises 1-4, find the frequency of the function.

1. $y=\cos 3 x$
2. $y=-\cos 4 x-3$
3. $y=\sin \frac{\pi x}{2}$
4. $y=4 \cos 0.4 x-3$
5. A sub-contra-octave A tuning fork (corresponds to the lowest note on a piano keyboard) vibrates with a frequency $f$ of 27.5 hertz (cycles per second). You strike a sub-contra-octave A tuning fork with a force that produces a maximum pressure of 4 Pascals. Write and graph a sine model that gives the pressure $P$ as a function of the time $t$ (in seconds).

## In Exercises 6 and 7, write a function for the sinusoid.

6. 

7.

8. When you ride a Ferris wheel, your distance from the ground will vary with respect to the number of seconds that have elapsed since the wheel started. The table shows your height $h$ (in meters) above the ground at time $t$ as you ride the Ferris wheel.

| $\boldsymbol{t}$ | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 15 | 20 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\boldsymbol{h}$ | 1 | 2.3 | 5.8 | 10.2 | 13.7 | 15 | 13.7 | 10.2 | 5.8 | 2.3 | 1 | 2.3 | 5.8 | 15 | 1 |

a. Use sinusoidal regression to find a model that gives $h$ as a function of $t$.
b. Predict your height above the ground after 42 seconds have elapsed.
